

ALIAKSEI GUIVAN

Senior Software Engineer

.NET | Microservices | AWS | GCP | Azure | React

Professional Experience

2025

–

now

Senior Software Engineer

Andersen Lab

- Developed and maintained microservices using .NET 6, .NET 8, supporting both synchronous and event-driven communication.
- Used Entity Framework Core for data access with PostgreSQL.
- Maintained and optimized CI/CD pipelines using GitLab CI.
- Deployed and operated containerized services on Kubernetes (EKS).
- Provisioned and deployed AWS infrastructure with Terraform.
- Hands-on experience with LLM-based tooling like GitHub Copilot, Windsurf and Claude Code.
- Owned features end-to-end across the full SDLC – from stakeholder communication to delivery.
- Built single-page applications using React, Redux, and TypeScript, following microfrontend architecture.
- Wrote and maintained automated E2E tests using Cypress.
- Mentored and onboarded new team members.

2021

–

2025

Senior Software Engineer

Godel Technologies Europe

- Developed RESTful APIs and services using .NET 3.1, .NET 6, .NET 8, applying Clean Architecture and CQRS patterns.
- Deployed and maintained containerized services using Docker and Kubernetes (EKS, AKS, GKE).
- Used Entity Framework Core for data access with PostgreSQL and MSSQL.
- Developed .NET worker services consuming and producing Kafka topics, processing and validating messages and persisting results to MongoDB.
- Built and operated cloud-native solutions across AWS, Azure and GCP including: Azure (Azure Functions, App Service, Blob Storage, Key Vault, Azure DevOps, Application Insights, AKS), AWS (Lambdas, SQS/SNS, ECS, EKS, S3, Secrets Manager, Parameter Store, Step Functions, CloudWatch), GCP (GKE, Cloud Storage, Pub/Sub, Cloud Logging) services with infrastructure managed via Terraform.
- Built and maintained CI/CD pipelines in GitLab; worked with Azure DevOps pipelines.
- Built single-page applications using React, Redux, and TypeScript.
- Contributed to an R&D project focused on detecting and preventing source code leakage via the GitHub, GitLab, and Bitbucket APIs.
- Contributed to Python codebases.
- Implemented contract testing using PactNet to ensure reliable API integrations across microservices.
- Applied Test-Driven Development (TDD) practices during bug resolution.
- Practiced pair and mob programming.
- Managed tasks and tracked progress using Jira and Azure DevOps Boards.
- Worked in Scrum-based agile teams.

2020

–

2021

Software Engineer

EPAM

- Developed backend application using ASP.NET Core Web API / MVC.
- Worked with MSSQL database using EF Core/Dapper to interact with.
- Built single-page application using Angular, Redux, and Material UI.

Skills

Backend:

C#, .NET, ASP.NET Core, SQL,
Microservices, CQRS, Event-Driven
Architecture, EF Core

Frontend:

React (TypeScript)

Databases:

PostgreSQL, MSSQL, MongoDB

Cloud & Infrastructure:

AWS, Azure, GCP, Kubernetes, Docker,
Terraform, CI/CD (GitLab CI, Azure
Pipelines)

Messaging:

GCP Pub/Sub, Kafka, AWS SNS/SQS

AI Tools:

GitHub Copilot, Windsurf, Claude Code

Education

Mechanical Engineer (Master's degree)

Belarusian State University
of Transport
2011 – 2017

Language

- English
- Russian
